Designer Wings - The real way to travel, Then you can get wet like a bird.

Mockup Designer Wings

I have designed a mockup version of how to detect movement required to freely operate wings. If studied closely, the patterns will result in a better method to understand how to react to the sensor and will lead to an intensive study on how the force can be applied across the bracing to equalize the forces. This includes understanding when the wings should collapse under pressure to prevent harm, for example, if stuck in a tornado or hurricane during flight.

In the design process, straps and other placements will need further refinement but should be kept away from bone structures. I recommend initial testing to prove the comfort of the design before true strapping or bracing is applied elsewhere. The design is for a hook type where pressure is applied to the lower backside or around the feet, inspired by older concepts that used a rod to hold one's feet while in flight. In cases where a footrest is needed, I suggest a more comfortable design that will flex to a point of comfort during flight, as there will always be a consistent force applied. The "feathers" or materials used will need to account for the angle of weight ratio.

Just know it says it a few times, Be sure you know your word of God, Through Jesus Christ.

Matthew 6:9 : After this manner therefore pray ye: Our Father which art in Heaven, Hallowed be Thy name.

Matthew 6:10: Thy kingdom come, Thy will be done in earth, As it is in Heaven.

Matthew 6:11: Give us this day our daily bread,

Matthew 6:12: And forgive us our debts, as we forgive our debtors.

Matthew 6:13: And Lead us not into Temptations, but deliver us from evil, For Thine is the kingdom, and the power, and the glory, for ever. Amen.
